04/20/2014

Weight Rating Definitions:
Gross Vehicle Weight Rating (GVWR) is established by the chassis manufacturer and is the maximum allowable weight that the chassis of a fully loaded RV can support. (including all passengers, fuel, water, supplies cargo and tongue weight)
Gross Axle Weight Rating (GAWR) is the maximum allowable weight that the components, such as tires, wheels, brakes, suspension and axle, is designed to support.
Gross Combination Weight Rating (GCWR) The maximum total loaded weight rating of the tow vehicle and anything it's towing. GCWR minus GVWR is the total allowable weight for a towed trailer.
